

ART REQUIREMENTS for Chocolate Items

When you send us your art make sure to include your company name!
If you do not use our template, let us know what type of item you are sending art for (chocolate, printed item, hot stamped item...)

There are 2 types of art files: raster and vector. We need **vector art** in order to make custom chocolate.
The following are some helpful tips for determining which file types you have and which ones to send to us:

VECTOR ART usually looks clean and crisp at any size - zoom in or out. It can look simple or very complex and can sometimes look very realistic. It can be in color or black and white.

ai, eps, pdf files are commonly used for vector images, though they can also contain raster images.

Make sure all fonts are converted to objects.

See below for details on converting fonts in common vector applications.

vector art - black and white

vector art - color

IMPORTANT- We cannot use raster art for making custom chocolate.

RASTER ART can look and print clean and crisp, but only if it is sized appropriately. If you zoom in further than the image is sized for, it will look blurry, chunky or "pixelated". If the image is printed larger than it is sized for, it will print blurry.

Photographs are always raster images.

**We cannot use raster art for making custom chocolate.
jpg, png, bmp and gif files are always raster images.**

raster art

raster art - zoomed in

We can convert raster images into vector for a fee. Make sure all images are embedded.
Ask your Account Representative for details.

If you don't have the right file type, ask one of the people listed below. It could be as easy as an email for them to send a vector art file to you. Ask your:

- printer (whoever printed your business card, letterhead, brochures...)
- IT person
- logo designer
- webmaster (they live in the raster art world, but might have your logo in vector)

Applications and File Types

All artwork should be PC-formatted and compatible with Adobe Illustrator CS4 or lower.

ILLUSTRATOR: "Create outlines" on all fonts. **.ai** and **.eps** are acceptable file formats. Embed images - linked images won't work.

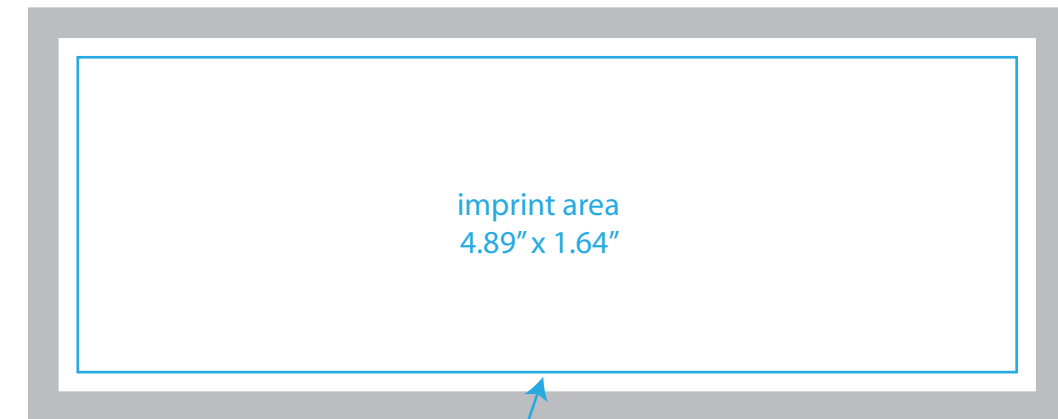

FREEHAND: All fonts must "convert to paths". **.eps** is the acceptable file format. Embed images - linked images won't work.

COREL DRAW: Change all fonts to "curves". **.ai** is the only acceptable file format. Embed images - linked images won't work.

PHOTOSHOP: **.tif, .jpg, .psd, .gif** or **.bmp** files are not accepted for making chocolate molds. Art services are available to convert these file types to vector. Please contact your sales rep for more information.

2" x 5" CHOCOLATE BAR

item numbers 1025, 3000

Artwork must remain inside this line

Art must be VECTOR art.

Black art is engraved. White art is raised.

In order for your art to show well in chocolate:

- fonts should be at least 12pt
- lines and details, and spaces in between lines and details should be at least a 1pt thickness and prominent lines should be thicker.
- convert all fonts to objects

ART REQUIREMENTS for Printed Items

When you send us your art make sure to include your company name!
If you do not use our template, let us know what type of item you are sending art for (chocolate, printed item, hot stamped item...)

There are 2 types of art files: raster and vector. We can use either type of art file for printed items. The following are some helpful tips for making sure the print quality on your final product is the highest possible quality.

VECTOR ART is the easiest to work with and often produces the best print quality. It can be re-sized to fit any item without any loss in image quality. If you are sending us vector art, make sure all fonts are outlined (see below for details on converting fonts in common vector applications), and make sure that all images are embedded.

RASTER ART can work just as well as vector art for printing, but the most important thing to keep in mind is that raster images are size and resolution dependent. You cannot increase the resolution or the size of the image without loss of quality. Make sure your image looks clear on your monitor when viewed at 100% in your image editing program with a resolution of 300dpi or higher and the image is sized to fit the template (or larger). When you save your art, if you are given a choice, save it as the highest possible quality. We can accept large high quality files. If your image is too large for emailing, you can upload it to our easy to use ftp site. Ask your Account Executive for details.

A

You can compare these 2 images. Image **A** is much higher quality than image **B**. But even image **A** has a size limit. Zoom way in and you will see it become blurry or pixelated just like image **B**.

B

Applications and File Types

All artwork should be PC-formatted and compatible with Adobe Illustrator CS4 or lower.

For printed products art can be raster or vector. We prefer .jpg, .psd, .ai, .eps, .tif or high quality .pdf files. We can accept .png and .gif but they are meant for web use and are almost always too small and too low in resolution to use for printing. We can accept .indd files, but, as with all other formats, all fonts must be converted to outlines. Also for .indd images should be embedded or included as separate files.

For best results and best print quality:

- make sure your images are embedded and fonts are converted.
- use PMS colors whenever possible. We can't color match without them.

ILLUSTRATOR:

"Create outlines" on all fonts.

FREEHAND:

All fonts must "convert to paths".

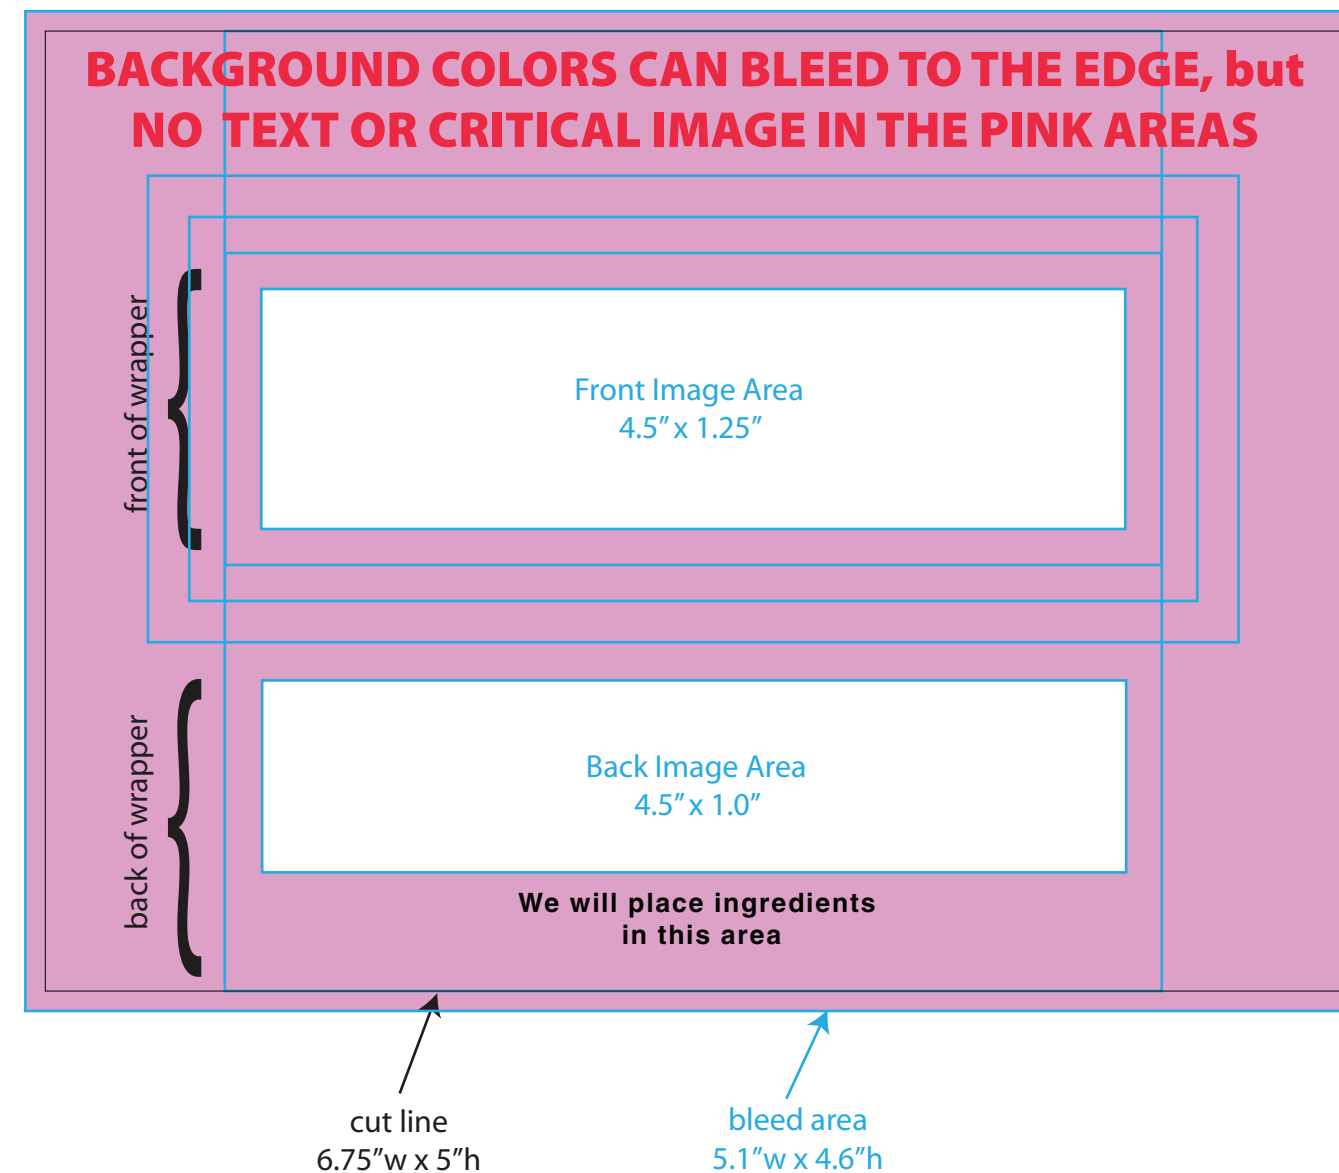

COREL DRAW:

Change all fonts to "curves".

PHOTOSHOP:

Rasterize type

2 x 5 FULL WRAPPER

Your color or background design can extend through the "no text" areas and out to the bleed area of the wrapper, but all text and logos must remain inside the Image Areas on the front and back.

No text on the side edges of the wrapper - only background colors or designs can print here.

For best results and best print quality:

- use PMS colors whenever possible. We can't color match without them.
- make sure your images are embedded.
- vector art works best, but if you are using raster art make sure your raster images are at least 300dpi and are sized in your image editing application to fit the print area(s) in the template. If you follow these guidelines and your image is clear when viewed at 100% in your image editor, then it is likely to print clear on your final product.
